ELECTRIC INTELLIGENT ULV FOGGER TO FIGHT VIRUSES!

Ultra low volume (ULV) fogging machines are cold fogging machines that use for:

- Chemical fogging: Applying chemical disinfectants to production areas as fogs or mists is a method used routinely in the food industry.
- ULV machines are used for disinfectants amongst other chemicals.
- Large volumes of air at low pressures to transform liquid into droplets that are dispersed into the atmosphere.
- Under typical conditions, fogging is carried out for a minimum of 15–30min to enable the fog to disperse and the chemical action to occur.
